Malattia di Charcot-Marie-Tooth: aspetti neurologici e prospettive

Dr. Stefano C. Previtali
Neurologia
IRCCS Ospedale San Raffaele - Milano

Neuropatie ereditarie tipo Charcot-Marie-Tooth (CMT)

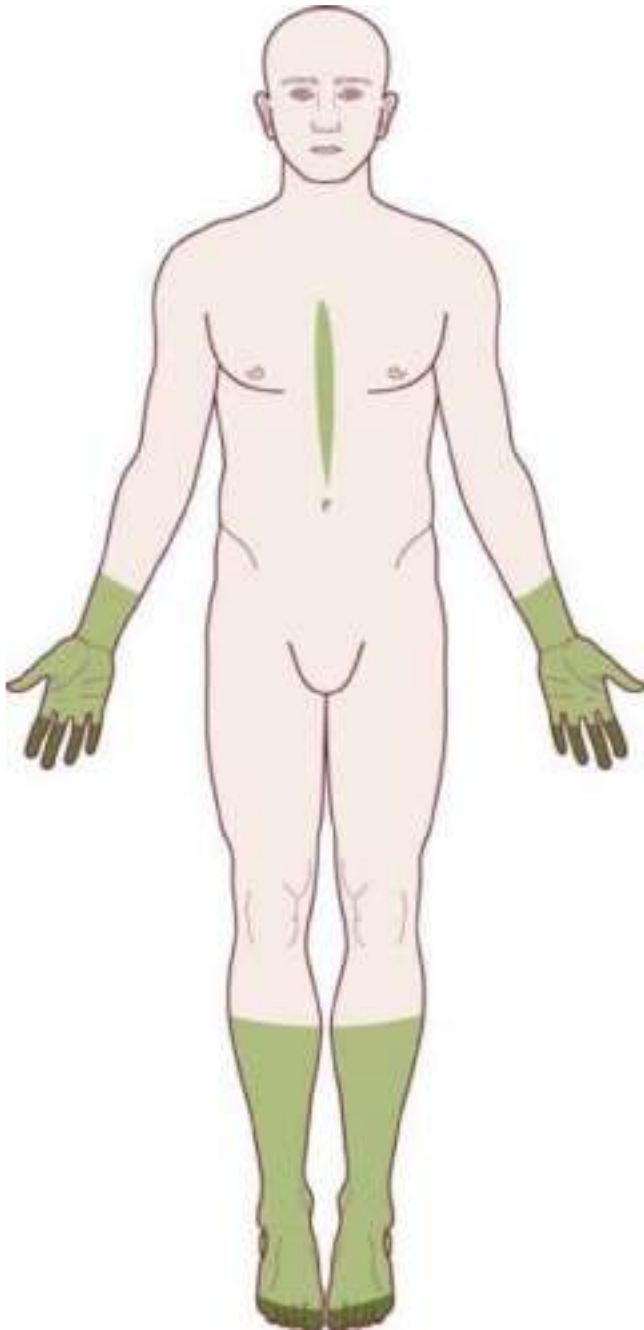
Descritte per la prima volta nel 1886 da
Jean-Martin Charcot, Pierre Marie, e Howard Henry Tooth

PREVALENZA <1/2.500
(sono quindi malattie rare)

Neuropatie ereditarie: aspetti clinici

PAZIENTE:

- Deficit motori distali (piedi, mani, < faccia e tronco)
- Atrofia muscolare distale
- Deficit sensitivi distali
- Disturbi dell'equilibrio (deficit sensibilità profonda)
- Dolore
- Deformità ossee



Neuropatie ereditarie: aspetti clinici

Aspetto caratteristico gambe con aspetto di bottiglia di Champagne rovesciata e piede cavo

Esordio poco definibile, spesso presente dalla giovane età

Neuropatia sensitivo motoria (forme sensitive pure, forme motorie pure)

Neuropatie ereditarie: classificazione

Sulla base della neurofisiologia

FORME DEMIELINIZZANTI (CMT1, CMT4):
velocità di conduzione motoria < 38 m/s agli arti superiori

FORME ASSONALI (CMT2)
velocità di conduzione motoria > 38 m/s agli arti superiori

FORME INTERMEDIE
velocità di conduzione motoria >25 m/s <45 m/s

Come distinguere e diagnosticare le diverse forme di CMT ?

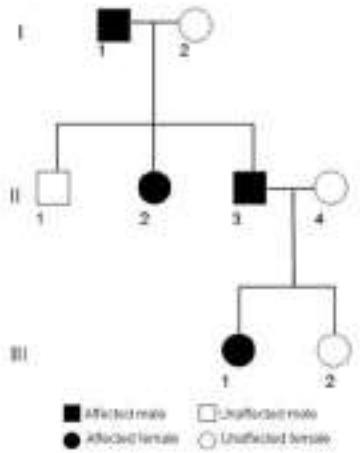
Neuropatie ereditarie: diagnosi

1. Forme primarie (CMT)
2. Neuropatie che appartengono a disordini multisistemici

Neuropatie ereditarie: diagnosi

Ereditarietà

1. Autosomica Dominante
2. Autosomica Recessiva
3. X-linked
4. Sporadica



- Progressione lenta
- Simmetrica e distale
- Deformità scheletriche
